

A new series of easy-to-use models for standard- and double-distance

- Stainless steel and brass housing
- Two housing length for each type
- Pre-wired and Plug-in connector types
- Short-circuit protection and reverse polarity protection

Sensor 500 Ordering Information

Note: The tables below contain part numbers for those Proximity Sensors involved in the Sensor 500 Program only. A complete listing of all E2EL part numbers can be found on the following pages.

	Max-Load	200 mA											
	Max-on-state Voltage drop	2.5 VDC (at 200mA load current and with 2 m cable)											
Circuit protection	Reverse polarity, output short-circuit												
Indicator	Operating indicator (yellow LED)												
Ambient temperature	Operating: -25° to 70°C												
Humidity	35 to 95 % RH												
Influence of temperature	± 10 % max. of Sn at 23°C in temperature range of -25° to 70°C												
Dielectric strength	1,500 VAC, 50/60 Hz for 1 min. between current carry parts and case												
Electromagnetic compatibility EMC	EN 60947-5-2												
Vibration resistance	10 to 70 Hz, 1.5 mm double amplitude for 1 hour each in X, Y and Z directions												
Shock resistance	300 m/s ² (approx. 30 G) for 6 times each in X, Y and Z directions												
Enclosure rating	IP 67 (EN 60947-1)

Installation

■ CAUTION

Item	Examples
Power Supply Do not impose an excessive voltage on the E2EL, otherwise it may explode or burn. Do not impose 24 VAC on any E2EL model, otherwise it may explode or burn.	
Load short-circuit Do not short-circuit the load, or the E2EL may explode or burn. The E2EL's short-circuit protection function is valid, if the polarity of the supply voltage imposed is incorrect and within the rated voltage range.	
Wiring Be sure to wire the E2EL and load correctly, otherwise it may explode or burn.	

■ CORRECT USE

Installation

Power Reset Time

The Proximity Sensor is ready to operate within 100 ms after power is supplied. If power supplies are connected to the Proximity Sensor and load respectively, be sure to supply power to the Proximity Sensor before supplying power to the load.

Power OFF

The Proximity Sensor may output a pulse signal when it is turned off. Therefore, it is recommended to turn off the load before turning off the Proximity Sensor.

Power Supply Transformer

When using a DC power supply, make sure that the DC power supply has an insulated transformer. Do not use a DC power supply with an auto-transformer.

Sensing Object

Metal Coating:

The sensing distance of the Proximity Sensor vary with the metal coating on sensing objects.

Wiring

High-tension Lines

Wiring through Metal Conduit

If there a power or high-tension line near the cord of the Proximity Sensor, wire the cord through an independent metal conduit to prevent against Proximity Sensor damage or malfunctioning.

Core Tractive Force

Do not pull cords with the tractive force exceeding the following:
 pull force (N) = 20 x cable diameter (mm)

Mounting

The Proximity Sensor must not be subjected to excessive shock with a hammer when it is installed, otherwise the Proximity Sensor may be damaged or lose the water-resistivity.

Environment

Water- Resistivity

Do not use the Proximity Sensor underwater, outdoors or in the rain.

Operating Environment

Be sure to use the Proximity Sensor within operating ambient temperature range and do not use the Proximity Sensor outdoors so that its reliability and life expectancy can be maintained. Although the Proximity Sensor is water resistive, a cover to protect the Proximity Sensor from water or soluble machining oil is recommended so that its reliability and life expectancy can be maintained. Do not use the Proximity Sensor in an environment with chemical gas (e. G., strong alkaline or acid gases including nitric, chromic, and concentrated sulfuric acid gases).

Item	Examples	Item
AND (serial connection)	<p style="text-align: center;">Correct</p>	<p>The Sensors connected together must satisfy the following conditions:</p> $i_L + (N-1) \times i = \text{Upper-limit of control output of each Sensor}$ $V_S - N \times V_R = \text{Load operating voltage}$ <p> $N =$ No. of Sensors $V_R =$ Residual voltage of each Sensor $V_S =$ Supply voltage $i =$ Current consumption of the Sensor $i_L =$ Load current </p> <p>If the MY Relay, which operate at 24 VDC, is used as a load for example, a maximum of two Proximity Sensors can be connected to the load.</p>
OR (parallel connection)	<p style="text-align: center;">Correct</p>	<p>The number of Sensors connected in parallel varies with the Proximity Sensor model.</p>

Effects of Surrounding Metal

Shielded types

Shielded types allow direct installation on metal plates in an embedded manner without performance change. A minimum distance of $3s_n$ is required between the active surface and a metallic surface in front of the device. (Fig. 1).

For SUS shielded types the following minimum distances are required to avoid performance change (see Fig.2 and table below):

Shielded SUS Types	Free zone
E2EL-C2□-DS	0.5 mm
E2EL-X2□-DS	0.5 mm
E2EL-X4□-D□S	1.0 mm
E2EL-X8□-D□S	2.0 mm

Fig.1: Shielded type (except SUS)

Fig.2: Shielded SUS type

Non-shielded types

Installation of non-shielded types in metal require the minimum distances according to Fig. 3.

Fig.3: Non-shielded type

NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.
