

LVDS Transmission Connector

CONNECTOR

FI-E Series

MB-0102-2

December 2003

<<Outline>>

Along with digitalization trends, cases where LVDS (Low Voltage Differential Signaling) is used for internal wiring in consumer products such as TVs are increasing. JAE has developed a connector that combines both electrical considerations for LVDS transmission and mechanical considerations for TV interiors.

Features

- Connector optimal for LVDS (Performance equal to FI-X connector series).
- Sufficient guide alignment and durability to permit blind mating.
- Mechanical lock available to prevent incomplete or inadequate mating.
- Low profile design with 3.2mm height when mounted.
- Crimp-style and solder-style available for harness-side. Crimp contact common to FI-X series.
