RV 16 Y N -4C MH 20 S B 103 K

NOTE: FMS = From Mounting Surface

Resistance Tolerance: K = $\pm 10\%$ (standard).Resistance Code: Expressed in ohms. A three digit code where the first two digits are significant figures, and the third digit indicates the number of zeros that follow these figures (i.e., 100 = 10 Ω ; 101 = 100 Ω ; 102 = 1,000 Ω ; 103 = 10,000 Ω ; 105 = 1,000,000 Ω). See table for standard resistance values.

For Single Unit:

Specify taper and resistance code as shown.

For Ganged Tandem Unit or Dual Unit:

Specify a taper code and resistance code for each unit starting with the front unit followed by the rear unit. If both units have the same taper and resistance codes, add "X2" suffix per example below.

Examples: B103A503 or if both units are the same: B103X2

Resistance Taper: B = Linear.

A = CW Audio (logarithm).

C = CCW Audio (logarithm).

Shaft End Style: S = Slotted; F = Flatted; R = Round.

For Single Shaft:

Specify the shaft length (FMS) and shaft end style as shown.

For Dual Concentric Shafts:

Specify the shaft length (FMS) and shaft end style for the inner shaft followed by the shaft length (FMS) and shaft end style for the outer shaft. Use a dash (-) to separate the code groups for the inner and outer shaft specifications. Example: 30R-20R

Standard Shaft Length: 10 = 10mm FMS.

15 = 15mm FMS.

Up to 30mm shaft length available (special order).

Switch Type: MH = SPDT, 110VAC, 0.5A, Rear Exit Lug Terminals.

SH = SPST, 110VAC, 0.5A, Rear Exit Lug Terminals.

Blank = No Switch.

Detent: -4C = Center Detent.

Blank = No Detent.

Style: N = Panel Mount, Single Unit, Single Shaft, Right Angle Ear-Lug Terminals.

L = Panel Mount, Single Unit, Single Shaft with Shaft Lock, Right Angle Ear-Lug Terminals.
