

S7030/S7031 series

**Back-thinned FFT-CCD**

The S7030/S7031 series is a family of FFT-CCD image sensors specifically designed for low-light-level detection in scientific applications. By using the binning operation, the S7030/S7031 series can be used as a linear image sensor having a long aperture in the direction of the device length. This makes the S7030/S7031 series suited for use in spectrophotometry. The binning operation offers significant improvement in S/N and signal processing speed compared with conventional methods by which signals are digitally added by an external circuit. The S7030/S7031 series also features low noise and low dark signal (MPP mode operation). This enables low-light-level detection and long integration time, thus achieving a wide dynamic range. The S7030/S7031 series has an effective pixel size of  $24 \times 24 \mu\text{m}$  and is available in image areas ranging from  $12.288 \text{ (H)} \times 1.392 \text{ (V)} \text{ mm}^2$  ( $512 \times 58$  pixels) up to a large image area of  $24.576 \text{ (H)} \times 2.928 \text{ (V)} \text{ mm}^2$  ( $1024 \times 250$  pixels).

**Features**

- **Non-cooled type: S7030 series**  
**One-stage TE-cooled type: S7031 series**
- **Pixel size:  $24 \times 24 \mu\text{m}$**
- **Line, pixel binning**
- **Greater than 90% quantum efficiency at peak sensitivity wavelength**
- **Wide spectral response range**
- **Low readout noise**
- **Wide dynamic range**
- **MPP operation**
- **High UV sensitivity with good stability**

**Applications**

- **Fluorescence spectrometer, ICP**
- **Industrial inspection**
- **Semiconductor inspection**
- **DNA sequencer**
- **Low-light-level detection**
- **Raman spectrometer**

**Selection guide**

Type No.	Cooling	Number of total pixels	Number of active pixels	Active area [mm (H) × mm (V)]	Suitable multichannel detector head
S7030-0906	Non-cooled	532 × 64	512 × 58	12.288 × 1.392	C7040
S7030-0907		532 × 128	512 × 122	12.288 × 2.928	
S7030-1006		1044 × 64	1024 × 58	24.576 × 1.392	
S7030-1007		1044 × 128	1024 × 122	24.576 × 2.928	
S7031-0906S	One-stage TE-cooled	532 × 64	512 × 58	12.288 × 1.392	C7041
S7031-0907S		532 × 128	512 × 122	12.288 × 2.928	
S7031-1006S		1044 × 64	1024 × 58	24.576 × 1.392	
S7031-1007S		1044 × 128	1024 × 122	24.576 × 2.928	

**General ratings**

Parameter	S7030 series	S7031 series
Pixel size	24 (H) × 24 (V) μm	
Vertical clock phase	2 phases	
Horizontal clock phase	2 phases	
Output circuit	One-stage MOSFET source follower	
Package	24-pin ceramic DIP (refer to dimensional outlines)	
Window*1	Quartz glass	AR-coated sapphire

\*1: Temporary window type (ex. S7030-0906N) is available upon request.  
(Temporary window is fixed by tape to protect the CCD chip and wire bonding.)

**Absolute maximum ratings (Ta=25 °C)**

Parameter	Symbol	Min.	Typ.	Max.	Unit
Operating temperature*2	Topr	-50	-	+50	°C
Storage temperature	Tstg	-50	-	+70	°C

	0 °C		-	10	100	
Readout noise*8		Nr	-	8	16	e <sup>-</sup> rms
Dynamic range*9	Line binning	DR	100000	125000	-	-
	Area scanning		30000	40000	-	-
Photo response non-uniformity*10		PRNU	-	±3	±10	%
Spectral response range		λ	-	200 to 1100	-	nm
Blemish	Point defect*11	White spots	-	-	0	-
		Black spots	-	-	10	-
	Cluster defect*12		-	-	3	-
	Column defect*13		-	-	0	-

\*6: The linearity is ±1.5%.

\*7: Dark current nearly doubles for every 5 to 7 °C increase in temperature.

\*8: Measured with a HAMAMATSU C4880 digital CCD camera with a CDS circuit (sensor temperature: -40 °C, operating frequency: 150 kHz)

\*9: Dynamic range = Full well capacity / Readout noise

\*10: Measured at one-half of the saturation output (full well capacity) using LED light (peak emission wavelength: 560 nm)

$$\text{Photo response non-uniformity} = \frac{\text{Fixed pattern noise (peak to peak)}}{\text{Signal}} \times 100 \text{ [%]}$$

\*11: White spots

Pixels whose dark current is higher than 1 ke<sup>-</sup> after one-second integration at 0 °C.

Black spots

Pixels whose sensitivity is lower than one-half of the average pixel output. (measured with uniform light producing one-half of the saturation charge)

\*12: 2 to 9 contiguous defective pixels

\*13: 10 or more contiguous defective pixels

**Spectral response (without window)\*14**

KMPDB0058EB

\*14: Spectral response with quartz glass or AR-coated sapphire is decreased according to the spectral transmittance characteristic of window material.

\*19: Isolation gate between vertical register and horizontal register. In standard operation, TG should be applied the same pulse as P2V.

**Specifications of built-in TE-cooler (Typ. vacuum condition)**

Parameter	Symbol	Condition	S7031-0906S/-0907S	S7031-1006S/-1007S	Unit
Internal resistance	R <sub>int</sub>	T <sub>a</sub> =25 °C	2.5	1.2	Ω
Maximum current*20	I <sub>max</sub>	T <sub>c</sub> *21=T <sub>h</sub> *22=25 °C	1.5	3.0	A
Maximum voltage	V <sub>max</sub>	T <sub>c</sub> *21=T <sub>h</sub> *22=25 °C	3.8	3.6	V
Maximum heat absorption*23	Q <sub>max</sub>		3.4	5.1	W
Maximum temperature of heat radiating side	-		70	70	°C

\*20: If the current greater than this value flows into the thermoelectric cooler, the heat absorption begins to decrease due to the Joule heat. It should be noted that this value is not the damage threshold value. To protect the thermoelectric cooler and maintain stable operation, the supply current should be less than 60% of this maximum current.

\*21: Temperature of the cooling side of thermoelectric cooler

\*22: Temperature of the heat radiating side of thermoelectric cooler

\*23: This is a theoretical heat absorption level that offsets the temperature difference in the thermoelectric cooler when the maximum current is supplied to the unit.

### Specifications of built-in temperature sensor

A thermistor chip is built in the same package with a CCD chip, and the CCD chip temperature can be monitored with it. A relation between the thermistor resistance and absolute temperature is expressed by the following equation.

$$R_{T1} = R_{T2} \times \exp \left( B_{T1/T2} \left( \frac{1}{T1} - \frac{1}{T2} \right) \right)$$

$R_{T1}$ : Resistance at absolute temperature  $T1$  [K]

$R_{T2}$ : Resistance at absolute temperature  $T2$  [K]

$B_{T1/T2}$ : B constant [K]

The characteristics of the thermistor used are as follows.

$R_{298} = 10 \text{ k}\Omega$

$B_{298/323} = 3450 \text{ K}$

KMPDB0111EB

**⚠ Precaution for use (electrostatic countermeasures)**

- Handle these sensors with bare hands or wearing cotton gloves. In addition, wear anti-static clothing or use a wrist band with an earth ring, in order to prevent electrostatic damage due to electrical charges from friction.
- Avoid directly placing these sensors on a work-desk or work-bench that may carry an electrostatic charge.
- Provide ground lines or ground connection with the work-floor, work-desk and work-bench to allow static electricity to discharge.
- Ground the tools used to handle these sensors, such as tweezers and soldering irons.

It is not always necessary to provide all the electrostatic measures stated above. Implement these measures according to the amount of damage that occurs.

**⚠ Element cooling/heating temperature incline rate**

When cooling the CCD by an externally attached cooler, set the cooler operation so that the temperature gradient (rate of temperature change) for cooling or allowing the CCD to warm back is less than 5 K/minute.

Multichannel detector heads C7040, C7041

**⚠ Features**

- ➔ **C7040: for S7030 series**  
**C7041: for S7031 series**
- ➔ **Area scanning or full line-binning operation**
- ➔ **Readout frequency: 250 kHz**
- ➔ **Readout noise: 20 e<sup>-</sup> rms**
- ➔ **ΔT=50 °C (ΔT changes by cooling method.)**
