

# Through Hole Fixed Inductors

**Token fixed inductors meet the needs of  
a variety of manufacturing methods (TCAL)**

▶ **Preview**

Token TCAL series fixed inductor utilizes the latest winding technology with special core material, sturdy construction, outer layer of epoxy resin processing, high Q value and self-resonance frequency, wide inductance range, high reliability, and low price.

The TCAL series is ideal for consumer electronics such as digital set-top boxes (DVB), digital video disc players (DVD), video cassette recorders (VCR), television (TV), computers, audio equipment, mobile communications, telephone, and various general-purpose electronic applications.

Token highly efficient automated production processes offer a full range of high-quality inductors products suitable for automatic plug-in operation. The TCAL provides 0204,0307,0410, and 0510 size varieties of different forming, such as Normal & Short Form, F Forming, U Forming, Pana Forming, and bulk products to meet the needs of a variety of manufacturing methods.

Token TCAL Series fixed inductors are full line conforming with RoHS specifications, Pb-free standards. Provide a complete inductor size and full range inductance, and custom parts are available on request. Token will also produce devices outside these specifications to meet specific customer requirements, please contact our sales for more information.

**Applications :**

- TV, VCR.
- Computer Devices
- Electronics products.
- Communication equipment.

**Features :**

- Low Cost.
- Coating epoxy resin that ensures the humidity resistance to be long life.

## ▶ How to Select a fixed inductor

Perfectly, inductors should have zero resistance and capacitance. This is not practically possible, as the conducting copper wires, used for fixed inductors, have small internal resistance.

### Important criteria for the selection are:

- **Inductance Range (H):**

The rated inductance range of the inductor. This is designated by  $\pm 10\%$  of the inductance.

- **Quality Factor (Q):**

The Q value of an inductor is a measure of the relative losses in an inductor. The Q is also known as the “quality factor” and is technically defined as the ratio of inductive reactance to effective resistance.

- **Self-Resonant Frequency (SRF):**

The frequency at which the inductor’s distributed capacitance resonates with the inductance. It is at this frequency that the inductance is equal to the capacitance and they cancel each other. The inductor will act purely resistive with a high impedance at the SRF point.

- **Permissible DC Current:**

Measured in Ohms, it is the maximum DC current that the inductor should be exposed to.
