

VS-500

Voltage Controlled SAW Oscillator

Features

- Improved High Performance ASIC
- Industry Standard Package, 9 x 14 x 4.5 mm
- Output Frequencies from 155 MHz to 850 MHz
- 3.3 V or 5.0 V Operation
- At 155.52 MHz, Jitter < 0.50 ps-rms (12 kHz to 20 MHz)
- At 622.08 MHz, Jitter < 0.30 ps-rms (50 kHz to 80 MHz)
- LV-PECL, PECL, or ECL Configurations
- Complementary Outputs
- Output Disable Feature

Applications

PLL circuits for Clock Smoothing and Frequency Translation

<u>Description</u>	<u>Standard</u>

Description

The VS-500 is a SAW based voltage controlled oscillator that operates at the fundamental frequency of the internal SAW filter. This resonator is a high Q quartz device that enables the circuit to achieve low phase jitter performance over a wide operating temperature range. The oscillator is housed in a hermetically sealed J-lead surface mount package offered on tape and reel. It has an output disable to facilitate on-board testing.

1. See Standard Frequencies and Ordering Information (Pg 8).
2. Parameters are tested with production test circuit below (Fig 2).
3. Parameters are tested at ambient temperature with test limits guardbanded for specified operating temperature.
4. Measured as the maximum deviation from the best straight-line fit, per MIL-0-55310.
5. Measured from 20% to 80% of a full output swing (Fig 1).
6. Not tested in production, guaranteed by design, verified at qualification.
7. Integrated across 12 kHz to 20 MHz, per GR-253-CORE Issue3.
8. Integrated across 50 kHz to 80 MHz, per GR-253-CORE Issue3.
9. Tested with $V_c = 0.3V$ to $3.0V$.
10. Tested with $V_c = 0.5V$ to $4.5V$.

- Test Circuit Notes:**
- 1) To Permit 50Ω Measurement of Outputs, all DC Inputs are Biased Down 1.3V.
 - 2) All Voltage Sources Contain Bypass Capacitors to Minimize Supply Noise.
 - 3) 50Ω Terminations are Within Test Equipment.

Absolute Maximum Ratings

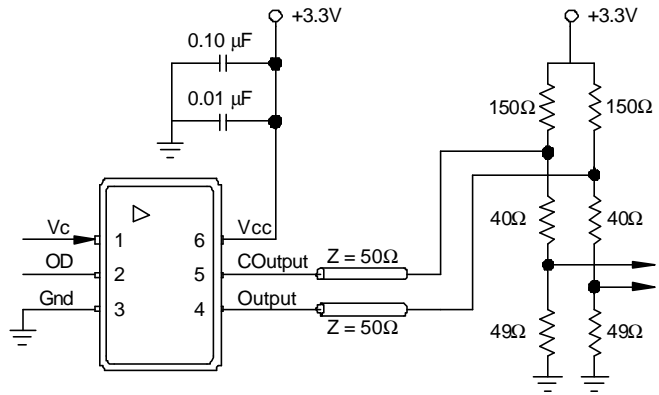

Parameter	Symbol	Ratings	Unit
Power Supply	V_{CC}	0 to 6	V
Output Current	I_{out}	25	mA
Voltage Control Range	V_C	0 to V_{CC}	V
Storage Temperature	TS	-55 to 125	°C

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied at these or any other conditions in excess of conditions represented in the operational sections of this datasheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability.

Suggested Output Load Configurations (3.3V Operation)

LV-PECL to LV-PECL: For short transmission lengths, the power consumption could be reduced by removing the 100Ω resistor and doubling the value of the pull down resistors.

LV-PECL to LVDS: Restricted for short transmission lengths. Configuration may require modification depending on LVDS receiver.

Functional Test: Allows standard power supply configuration. Since AC coupled, the LV-PECL levels cannot be measured.

Production Test: Allows direct DC coupling into 50Ω measurement equipment. Must bias the power supplies as shown. Similar to Figure 1.

Reliability

The VS-500 family is capable of meeting the following qualification tests:

Environmental Compliance

Parameter	Conditions
Mechanical Shock	MIL-STD-883, Method 2002
Mechanical Vibration	MIL-STD-883, Method 2007
Solderability	MIL-STD-883, Method 2003
Gross and Fine Leak	MIL-STD-883, Method 1014
Resistance to Solvents	MIL-STD-883, Method 2016

Handling Precautions

Although ESD protection circuitry has been designed into the VS-500 proper precautions should be taken when handling and mounting. VI employs a human body model and a charged-device model (CDM) for ESD susceptibility testing and design protection evaluation.

ESD Ratings

Model	Minimum	Conditions
Human Body Model	1500 V	MIL-STD 883, Method 3015
Charged Device Model	1000 V	JESD 22-C101

Recommended Solder Reflow Profile

VI qualification includes aging at various extreme temperatures, shock and vibration, temperature cycling, and IR reflow simulation. The conditions a device can withstand are well understood and devices can be subjected to the profile above. This profile shows a ramp up condition to prevent thermal shock, a preheat period in which the flux is activated, a ramp up to 183°C which is the reflow temperature of Sn/Pb eutectic, and a gradual cool down. The time above 183°C should not exceed 60 seconds and the peak temperature should be no more than 220°C for 10 seconds. The VS-500's are hermetically sealed so an aqueous wash is not an issue.
