## DESCRIPTION

The 74LVQ280 is a low voltage CMOS 9 BIT PARITY GENERATOR fabricated with sub-micron silicon gate and double-layer metal wiring $\mathrm{C}^{2} \mathrm{MOS}$ technology. It is ideal for low power and low noise 3.3 V applications.

It is composed of nine data inputs ( A to I ) and odd/ even parity outputs ( $\Sigma$ ODD and $\Sigma E V E N$ ). The nine

| PACKAGE | T \& R |
| :---: | :---: |
| SOP | 74LVQ280MTR |
| TSSOP | 74LVQ280TTR |

data inputs control the output conditions. When the number of high level input is odd, 上ODD output is kept high and $\Sigma$ EVEN output low.
Conversely, when the number of high level is even, $\Sigma$ EVEN output is kept high and $\Sigma$ ODD low.
The IC generates either odd or even parity making it flexible application. The word-length capability is easily expanded by cascading.
All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
